ProjectName	**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**
Maximum Marks	3 Marks

REQUIREMENTS ANALYSIS

Functional Requirements

The system shall provide a streamlined ServiceNow process for requesting a Standard Laptop through the Service Catalog. The process shall support submission of the laptop request, progression through the approval stage, and automatic execution of the configured Flow Designer workflow after the relevant approval condition is satisfied.

- The system shall provide the Standard Laptop item through the Service Catalog.
- The user shall be able to place an order for the Standard Laptop.
- The request shall proceed through the required approval process.
- The Flow Designer flow shall use a Service Catalog trigger.
- The flow shall create a Catalog Task using the Requested Item record.
- The generated Catalog Task shall contain the required short description.
- The Catalog Task shall be assigned to the Hardware assignment group.
- The flow shall use the approved request condition before creating the configuration task.

Flow Configuration Requirements

The project requires creation of a Flow Designer flow named “Standard laptop task.” The flow is configured under the Global application and uses System User as the Run As option. The flow must contain the Service Catalog trigger and a Create Catalog Task action.

- Flow Name: Standard laptop task.
- Application: Global.
- Run As: System User.
- Trigger: Service Catalog.
- Action: Create Catalog Task.
- Requested Item Record: used as the request item input.
- Short Description: “Laptop need to Configured.”
- Assignment Group: Hardware.
- Approval: Approved.

REQUIREMENTS ANALYSIS – CONTINUED

Service Catalog Requirements

The Standard Laptop Service Catalog item shall be connected to the configured Flow Designer flow through the Process Engine settings. The remaining process shall allow the user to select Standard Laptop under the Hardware category and place the order using Order Now.

- The Standard Laptop catalog item shall be available for ordering.
- The Process Engine shall reference the Standard laptop task flow.
- The user shall be able to place the Standard Laptop order.
- The order status and Request Number shall be available for tracking.
- The request record shall provide access to the Approvers section.
- After approval, the Requested Item record shall be accessible.

Approval and Task Generation Requirements

After the Standard Laptop request is approved, the configured flow shall create the Catalog Task associated with the Requested Item. The generated task shall show the configured short description and Hardware assignment group so that the configuration activity can be performed by the appropriate team.

- The request shall have an approval state of Approved before task generation.
- The Requested Item shall contain the generated Catalog Task.
- The Catalog Task shall show the Hardware assignment group.
- The Catalog Task shall show the configured short description.
- The generated task shall be available for further processing by the Hardware team.

Non-Functional / Process Requirements

- The process should reduce manual intervention in standard laptop procurement.
- The workflow should reduce the possibility of configuration tasks being overlooked or delayed.
- The process should support timely laptop configuration.
- The workflow should improve resource utilisation through automatic task allocation.
- The solution should provide a consistent and streamlined procurement process.

Expected Outcome

The requirements are intended to establish an automated connection between the Standard Laptop Service Catalog request, approval, and hardware configuration task. The expected outcome is a more seamless procurement process with reduced manual overhead, timely task creation, appropriate assignment to the Hardware group, and improved efficiency within IT procurement operations.

Requirements Traceability

The requirements directly support the project objective of using Flow Designer to automate the procurement and configuration workflow. The project documentation specifies the Service Catalog trigger, Create Catalog Task action, approval condition, Hardware assignment group, and Standard Laptop catalog item as the core implementation elements.
