ProjectName	**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**
Maximum Marks	3 Marks

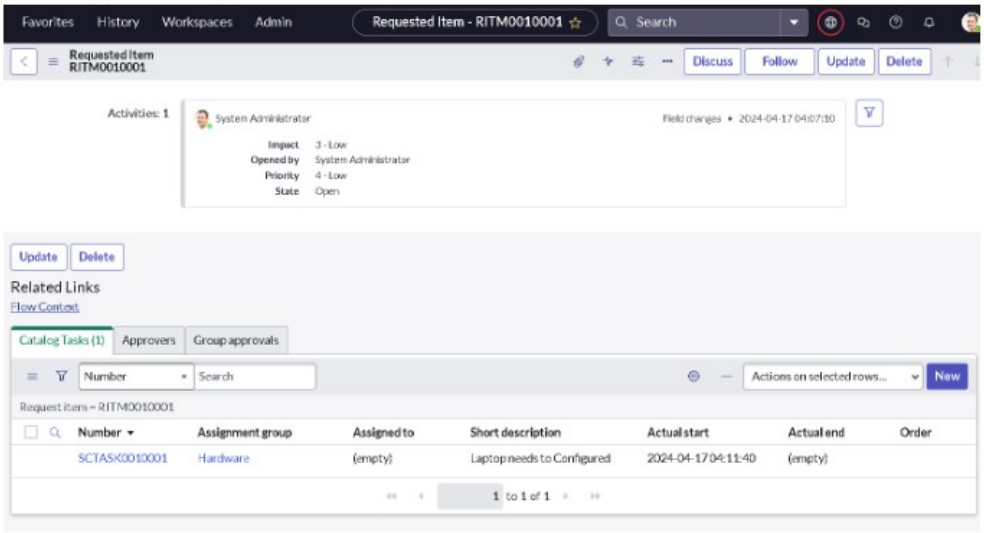

APPROVAL CONFIGURATION

9. Right Click on the Record to see config in that Click on the Approve.

10. Then click on the Requested item Section
11. Open that Requested Item record

Configuration Overview

The approval stage is part of the Standard Laptop procurement workflow. After the order is submitted, the Request

record provides an Approvers section where the approval can be processed.

Key Configuration Steps

- Open the Request record generated from the Standard Laptop order.
- Scroll to the Approvers section.
- Review the approval record associated with the request.
- Use the record action to approve the request.
- Open the Requested Item after approval.
- Verify that the Catalog Task is generated for the approved request.

APPROVAL CONFIGURATION – DESCRIPTION

Implementation Details

The source document shows the Approvers section and the approval action. Approval is significant because the Flow Designer action is configured with Approval = Approved. After approval, the Requested Item can be opened and the generated Catalog Task can be verified.

Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
